

THE CLAUDE STARTER SYSTEM

20 copy-paste prompts, installable skills, and five-minute guides that turn Claude into a coworker that hands you finished work. Built for consultants, marketers, creators, and founders. No coding.

1–12 Twelve prompts that end in a deliverable: reports, dashboards, content weeks, proposals, SOPs, decision memos

13–15 Three installable skills: Morning Briefing, Content Repurposer, Weekly Review

16–20 Five guides: picking the right Claude model, Projects, memory, artifacts, the 10-minute Cowork setup

1. The Client-Ready Report

Paste your rough notes, get a structured report with an executive summary. Works for client updates, research findings, and internal briefs.

PASTE INTO CLAUDE

Turn my notes below into a client-ready report. Structure: executive summary (3 sentences max), key findings as numbered points with one line of evidence each, risks or open questions, and recommended next steps with owners. Keep my facts exactly as given, flag anything that looks contradictory, and write at the level of a busy executive. Format it as a clean document I can export.

MY NOTES:

[paste your rough notes]

2. The Working Dashboard

Give Claude a spreadsheet or CSV and get a live, interactive dashboard as an artifact. No tools, no installs.

PASTE INTO CLAUDE

Build me an interactive dashboard as an artifact from the data below. Include: KPI summary cards for the most important totals, a breakdown chart by the most meaningful category, a trend view over time if dates exist, and a filterable table of the raw rows. Choose sensible metrics yourself, label everything in plain language, and make it presentable enough to screen-share.

DATA:

[paste CSV rows or a table]

3. The Week of Content

One topic in, seven platform-ready posts out, written in your voice instead of AI-speak.

PASTE INTO CLAUDE

Write 7 posts for [platform] from the topic and voice sample below: one contrarian take, one step-by-step, one story from experience, one list, one common-mistake post, one before/after, one question post. Match my voice sample exactly (sentence length, tone, quirks). Every post needs a first line that stops scrolling, no hashtag spam, no "game-changer" language.

TOPIC: [topic]

VOICE SAMPLE (something I wrote):

[paste 100+ words you wrote]

4. The Inbox Triage

Paste a messy inbox screenful, get priorities and ready-to-send replies.

PASTE INTO CLAUDE

Triage the emails below. Give me: (1) a priority-ordered list with one line on why each matters, (2) which ones can be ignored or archived and why, (3) full draft replies for the top 3, in my voice, short and decisive. Ask me at most 2 clarifying questions only if a reply truly depends on it.

EMAILS:

[paste subject lines + bodies or summaries]

5. The Meeting Prep One-Pager

Walk into any meeting with a brief that took 60 seconds to make.

PASTE INTO CLAUDE

Build a one-page meeting brief from the materials below: who's attending and what each person cares about, the 3 decisions this meeting should produce, my strongest talking points with evidence, likely objections and my best responses, and one question I should ask that nobody expects. Keep it scannable.

MEETING CONTEXT (agenda, past emails, notes):

[paste]

6. The Proposal Draft

Client conversation notes become a proposal with scope, timeline, and pricing structure.

PASTE INTO CLAUDE

Draft a client proposal from my notes below. Sections: the client's problem in their own words, proposed approach in 3 phases with what each delivers, timeline, investment (structure it as options: good/better/best using my price notes), what I need from them, and next step. Write confidently, no filler, no "I hope this finds you well".

NOTES FROM THE CONVERSATION:

[paste]

7. The Competitor Teardown

A structured read on any competitor: positioning, pricing, weaknesses, and your angle.

PASTE INTO CLAUDE

Analyze this competitor for me: [name + website/description]. Give me their positioning in one sentence, who they actually serve, their pricing logic, their 3 real strengths, their 3 exploitable weaknesses, and the sharpest angle for me to win against them given my business: [one line about your business]. Be blunt; if they're strong somewhere, say so.

8. The Decision Memo

Turn a decision you keep circling into options, trade-offs, and a recommendation.

PASTE INTO CLAUDE

I need to decide: [describe the decision and what's at stake]. Write me a decision memo: restate the decision precisely, list the real options including the ones I haven't mentioned, score each on cost, risk, upside, and reversibility, then make a clear recommendation with your reasoning. Argue with me if my framing is wrong. End with: what would have to be true for the runner-up to win.

9. The SOP Writer

Describe a process once, get documentation your team (or future you) can follow.

PASTE INTO CLAUDE

Turn my description below into a standard operating procedure: purpose (2 lines), when to run it, numbered steps precise enough that a new hire could follow them without asking me anything, common mistakes with fixes, and a completion checklist. Ask me questions about any step that's ambiguous before writing.

THE PROCESS AS I DO IT:
[describe it as if telling a colleague]

10. The Data Cleaner

Messy spreadsheet in, clean data plus a plain-language summary out.

PASTE INTO CLAUDE

Clean the data below: fix inconsistent formatting (dates, names, casing), flag duplicates and impossible values instead of silently deleting them, and return the cleaned table plus a summary of what you changed and what needs my human judgment. Then tell me the 3 most interesting things you noticed in the data.

DATA:
[paste]

11. The Landing Page

Describe your offer, get a working page as an artifact you can preview instantly.

PASTE INTO CLAUDE

Build a complete landing page as an artifact for this offer: [describe product/service, who it's for, price]. Include: a headline about the outcome (not the product), 3 benefit blocks, a social-proof placeholder section, one clear call to action repeated twice, and an FAQ with the 4 most likely objections answered honestly. Modern, clean design. Then list what I should replace with real assets.

12. The Learning Accelerator

Any skill, compressed into a 7-day plan built around your actual situation.

PASTE INTO CLAUDE

I want to learn [skill] for [why]. I can spend [time] per day. Build a 7-day plan where every day ends with something produced, not just consumed: day-by-day tasks, exactly what "done" looks like each day, and the one mistake beginners make at each stage. Then act as my coach: start day 1 with me right now.

These 12 are the free tier. The Vault has 550+.

Every prompt and skill we make, sorted by your job (consultant, marketer, creator, founder, agency), updated weekly, \$17 one time against a \$49 list price, with a 7-day refund. → aitomationacademy.com/vault

SKILLS 13-15 · INSTALL ONCE, REUSE FOREVER

A skill is a small instruction file Claude loads automatically when relevant. In the Claude apps: Settings → Capabilities/Skills → add. In Cowork: Customize → Skills → Upload. Save each block below as SKILL.md inside a folder named after the skill.

13. Morning Briefing

SKILL.md

```
---
name: morning-briefing
description: Build my morning briefing when I say "morning briefing" or paste my calendar/inbox at the start of the day
---
When the user asks for a morning briefing:
1. Ask for (or use, if provided) today's calendar and unread email subjects.
2. Produce: top 3 priorities for today with reasoning, meetings with one prep line each, emails needing replies before 10am, and one thing being avoided that should be done first.
3. Keep the whole briefing under 200 words. Decisive tone.
```

14. Content Repurposer

SKILL.md

```
---
name: content-repurposer
description: Repurpose any content the user pastes (video transcript, blog post, podcast notes) into other formats
---
When the user pastes content and asks to repurpose:
1. Identify the 3 strongest ideas in the source.
2. Produce: a LinkedIn post, a Twitter/X thread (6-8 posts), a newsletter section, and 3 short-video hooks.
3. Preserve the user's voice from the source. Never invent claims not in the source.
4. End by asking which piece to expand.
```

15. Weekly Review

SKILL.md

```
---
name: weekly-review
description: Run my Friday weekly review when I say "weekly review"
---
When the user starts a weekly review:
1. Ask: what shipped this week, what stalled, what's due next week.
2. Produce: wins (with what made them work), stalls (with the real blocker named honestly), next week's top 3 with the first concrete step for each, and one thing to stop doing.
3. Compare against last week's review if provided. Call out repeating stalls.
```

16. Which Claude model, when

Haiku is the fast one: triage, quick drafts, bulk small tasks. **Sonnet** is the everyday default: strong writing and analysis at speed, and what most plans give you out of the box. **Opus** and **Fable** are the heavyweights: complex documents, tricky reasoning, long multi-step work where quality beats speed.

The practical rule: start every real deliverable on the strongest model your plan offers; drop down only when the task is mechanical. Model families update often, so think in tiers (fast / default / strongest), not names.

17. Projects: a workspace per client in 5 minutes

A Project is a folder with memory. Create one per client or recurring job, then: upload the documents Claude should always know (brand guide, past work, key facts) and write custom instructions like "You help me with [client]. Their voice is [X]. Never suggest [Y]. Always format deliverables as [Z]."

Why it matters: every chat inside the Project starts already briefed. The repeated pasting of context is what burns most people's time; Projects delete that entirely.

18. Memory and the instructions that persist

Claude's memory (Settings → Capabilities) lets it retain facts about you across chats: your role, preferences, current projects. Tell it things once ("I'm a consultant, my clients are dental practices, my reports always end with next steps") and stop re-introducing yourself in every conversation.

Power move: ask Claude "what do you remember about me?" monthly, and prune what's stale. Memory is a tool you curate, not magic.

19. Artifacts: stop settling for chat replies

When Claude builds something in a separate panel (a document, dashboard, web page, calculator), that's an artifact: a real, self-contained deliverable you can iterate on, share, and reuse. If you get a wall of chat text when you wanted a thing, say: "Build this as an artifact."

The mindset shift: chat answers get read once and die. Artifacts are work products. Prompts 2 and 11 in this system produce them deliberately.

20. The 10-minute Cowork setup

Claude Cowork (in the desktop app) is Claude with hands: it can work with your files and folders, connect to your email and calendar, and run scheduled tasks while you do something else.

Setup: open Cowork in the desktop app → point it at one work folder (start small) → connect your email/calendar connector → give it one real job, like "go through this folder of invoices and build me a summary spreadsheet." Ten minutes in, you'll understand why we call it delegating instead of chatting.

The Starter System is day one. The Academy is the path.

The 7-Day Claude Challenge (zero to a live website), the Cowork and Claude Code courses, the full 550+ prompt Vault included, and a weekly live call where your real project gets fixed. 1,200+ members. Founder rate \$69/mo locked for life, rising to \$99/mo at 1,300 members. → aitomationacademy.com/academy
